

Title: The Collection of Exercises About Qaudrangles

Author: Bc. Pavel Nohál

Department: Department of Mathematics Education

Supervisor: doc. RNDr. Jarmila Robová, CSc., Department of Mathematics Education

Abstract:

The master thesis is focused on exercises regarding qaudrangles. This gives a chance to pupils of primary schools and lower secondary schools to repeat and practice math curriculum with a view of further study, but also develop pupils' common sense and logical thinking. The quadrangles are being encountered by us every day and therefore the exercises in this area are largely connected with the practical life. As not many current Collections on the market are dealing exclusively with quadrangles, author would like to fill this vacancy by this thesis.

Keywords:

Quadrilaterals and their division

Parallelograms and trapezoids

Circumference and area

Tops, sides and interior angles
